

- b) executing the directed image capture sequence in the hand-held digital camera to display interactive instructions on the integrated display that prompt the user to perform a first operation; and
- c) in response to the user performing the [the] first operation, automatically updating the interactive instructions to prompt the user to perform a second operation, thereby guiding the user through a series of related image captures, while minimizing the number of key sequences the user must memorize in order to perform the operations.

14 (Once Amended) A method for controlling user interaction in a hand-held digital camera having an integrated display, the method comprising the steps of:

- d) providing the hand-held digital camera with a directed image capture sequence comprising a set of program instructions for guiding a user through a series of related image captures;
- e) executing the directed image capture sequence in the hand-held digital camera such that a first interactive instruction is displayed on the integrated display prompting the user to capture a first image; [and]
- f) waiting for the user to capture the first image;
- g) in response to the user capturing the first image, displaying a second interactive instruction prompting the user to capture a second image; and
- h) storing the images as a related group of images.
